

## Where in the World?

Data is often mapped by its latitude and longitude, a coordinate system with the x-axis the equator and the y-axis the prime meridian:

(from worldatlas.com)

Using this coordinate system, New York is at (-74.0, 40.7). This is also written 40.7 N, 74.0 W (where N stands for North and W for West). Use the map and the globe to fill in the following:

Name	Longitude	Latitude
London, United Kingdom		
	13	42
Honolulu, Hawai'i		
San Francisco, California		
	31	30
Tokyo, Japan		
Christchurch, New Zealand		
	-118	34
	-71	-34
